

## ASE 2000 Communication Test Set Overview & Pricing

**Overview** The ASE 2000 is a PC based Communication Test Set that supports a large number of RTU/IED protocols. ASE first introduced their PC based Test Set line in 1989. Since then, there have been three major upgrades to the Test Set product line. The ASE 2000 is the latest in the ASE Test Set series and offers some significant improvements over earlier versions. While previous versions were DOS based applications, the ASE 2000 is a true windows application that runs under Windows 95, Windows 98, Windows ME, Windows NT 4.0 and Windows 2000

Model	Description	Price (US\$)
ASE2000-PCM-M	ASE 2000 Test Set for operation on laptop computers. Includes ASE dual-channel ASE Bell-202 modem, cables, adapters, software, and documentation.	\$3,950.00
ASE2000-PCM-RS	As above, without Bell-202 modem	\$3,325.00
ASE2000-COM	ASE 2000 Test Set for operation with standard PC COM ports. Operates on either desktop or laptop computers. Includes cables, adapters, software, and documentation.	\$2,950.00

**Protocols** Test Set protocols are licensed on a company basis. Each Test Set purchase includes support for one protocol. Additional protocols are available for a one-time charge of \$250 per protocol. Once a company has obtained the rights to use a protocol, that protocol can be used on all Test Sets owned by the company.

For example, a customer purchasing three Test Sets and four protocols would be charged \$250 for the fourth protocol only. All four protocols could be used on all Test Sets. If the same customer purchases a single Test Set in the future they would be entitled to the four protocols from the original purchase plus support for one new protocol at no additional cost.

**PTI-Plus to ASE2000 Upgrade Pricing** Current owners of PTI-PLUS RTU Test Sets can upgrade to the ASE 2000 Communication Test Set. Old equipment & cables must be returned.
